Orders

¥250.3

YoY -0.8% Vs.Fcst +4.3% **Net Sales**

¥234.4

YoY -14.4% Vs.Fcst +2.0% **Operating Profit**

¥24.9

YoY -52.6% Vs.Fcst +45.8% **Ordinary Profit**

¥23.9

YoY -54.2% Vs.Fcst +40.0% Net Profit

¥18.4

YoY -51.7% Vs.Fcst +54.2%

Orders

- •Orders bottomed out in the 1Q, and recovered in the 2Q, led mainly by demand for AI/data centers and memory.
- •Orders in the 2Q totaled ¥146.1, and we expect steady trends in the second half.

Net Sales

- •Net sales decreased YoY as the 1Q was weak due to customers' cautious investment decisions under the impact of U.S. tariffs.
- •Net sales for the 2Q amounted to ¥153.7, marking the second-highest level on record on a quarterly basis.

Profit

- •Profits declined YoY due to the decrease in net sales.
- •Due mainly to improvements in the product mix such as increased sales of compression, each level of profits exceeded the forecast.

FY2025 F/H Consolidated Financial Results

¥100M	FY2024 F/H Results	FY2025 F/H Results	Variance	FY2025 F/H Forecast	Vs.Fcst
Net Sales	273.9	234.4	-39 .4 (-14.4%)	230.0	+ 4.4 (+2.0%)

Table of Contents

- 1. FY2025 First Half Results
- 2. FY2025 Forecast

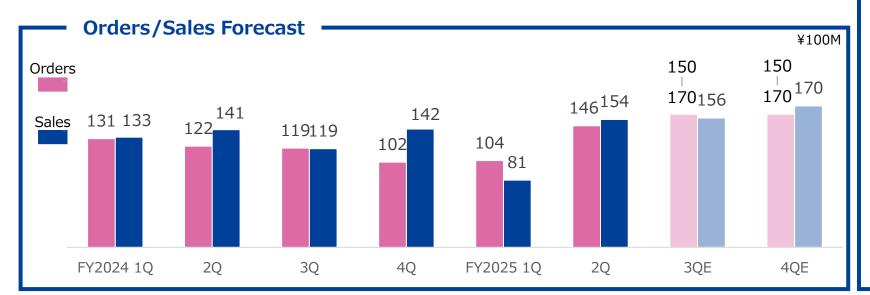

Market Outlook

- ▶ Orders for AI and data centers is on the rise, and it will continue to drive growth in the second half.
- ▶ Orders for products targeting next-generation markets, such as equipment for development purposes, are also steady.

Sales

▶ The investment environment, which had remained cautious due to U.S. tariff policies, has improved, and an increase in sales is expected in the second half.

Orders Forecast

Net Sales	¥560.0
Operating Profit	¥98.0
Ordinary Profit	¥98.0
Net Profit	¥68.6

HBM-related information update

Outlook

- Against the backdrop of changes in the competitive environment, each company is increasing production and strengthening investment in mass production of next-generation HBM.
- HBM adoption is expected to advance for inference use in cloud servers as well.
- Total shipments of existing HBM molding equipment are approximately 30 units.*

 Due to expanding applications and markets, an additional 30–45 units of investment will be required within a few years.*

*Company estimate. Total shipments include competitor equipment.

TOWA

- Customer certification has been obtained for HBM4 as well, and the customer base is expanding.
- Technical requirements, such as narrow-gap MUF, are becoming even more advanced. In addition to increased demand for high-performance equipment replacement, entry barriers are also rising.

Semiconductor Manufacturing Process

Semiconductor Business

New Business

Create new market and develop new business

TSS Business

(Total Solution Service)

Propose kinds of solutions such as after sales service, refurbishment, fixing of TOWA's semiconductor manufacturing equipment and used equipment sales.

All molding process all over the world to TOWA!!

- > Life Extension Program
- Used equipment sales
- Prevention & Upkeep (year to year basis contract)
- > Parts provision
- > Training Center

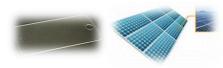

Coating Business

Apply TOWA's original mold surface processing technologies to medical products and domestic articles.

Expand share in pill pressing machine

Expand share in glass products

Nano tech Business

Apply ultra precise and fine processing technology used in ultra precision mold processing to medical and automobile fields.

Develop products in bacteria cultivation business

Develop lenses for Head Up Display

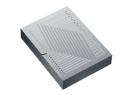

Develop lens for air picture projection

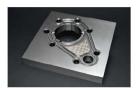

Tooling Business

Sell tools developed in house and incorporate TOWA's know-how as a mold manufacturer.

CBN·Ultra hard end mill

Processing by undertaking customer order

Fusion of a 3D printer and TOWA's too

TOWA Group's Position in Semiconductor Manufacturing

Semiconductor equipment manufacturers can be classified as those producing specialized equipment for wafer (front-end) process, assembly (back-end) process, or inspection process, which they provide to semiconductor manufacturers. The semiconductors these manufacturers produce with this equipment are further supplied to downstream manufacturers who incorporate these semiconductors into their own products. The TOWA Group is a manufacturer of semiconductor equipment used in the back-end process.

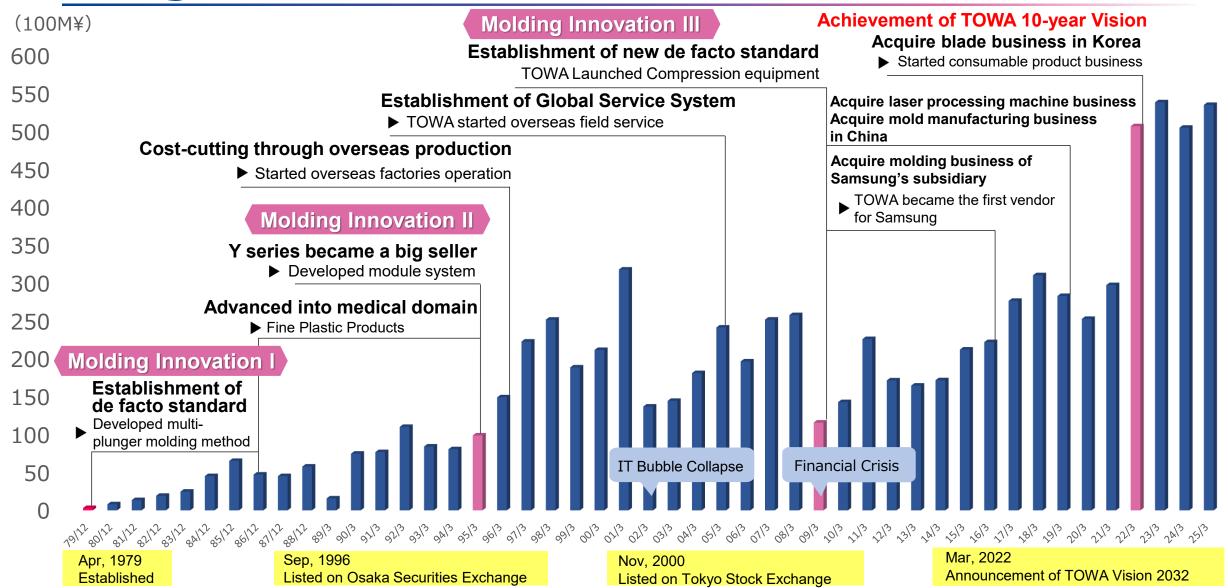

Global share of semiconductor molding equipment

*Created by our company based on data from TechInsights

Progress of TOWA

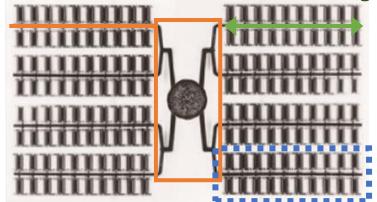

Molding innovation I (1979)

Conventional Mold

Manual molding by putting one palm size resin into the central pod. Resin runs long distance. Molding quality is not homogeneous. And much waste of resin.

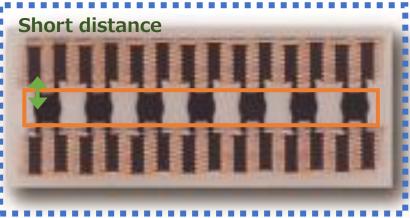

Much waste of resin Resin runs long distance

Multi-Plunger Mold

Auto molding by putting finger size resins into several pods. This realized short runner, homogeneous molding quality and less waste of resin.

Less resin waste

Molding innovation II (1995)

Module System (Y series)

Before the development of Module System, Molding equipment was...

Each equipment is designed depends on what or how much it will manufacture. Semiconductor manufacturers had to buy another equipment, when they want to manufacture another type of product or increase their product volume.

Module System enables to adjust press number!!

• Even you have only one Y series machine, you can manufacture many types of products or increase your product volume.

Y series is sufficient to meet the needs of assembly subcontractor, to perform backend process bringing from IDM.

2 Module Connection

4 Module Connection

Semiconductor molding equipment is one of the strongest quality of TOWA.

Molding innovation III (2009)

Compression Molding Equipment

Independent compression molding technology has enabled to mold cutting-edge devices, and cut the cost significantly!!

The compression technology is unrivaled from its launch in 2009 because of the patent and technical difficulty.

Features

- 100% resin efficiency(CO2 emissions reduced by about 70%)
- Compression molding with no resin fluidity (reduce defective products)
- Most suitable for cutting-edge such as memory and 5G
- Applicable to both granular type and liquid type resin
- Applicable to both panel size and wafer size
